our nation is still reeling from the 346 fatalities suffered on two flights of the boeing 737 max 8 planes the first in may 2017 and the second in march 2019 these are just one of the series of costly and deadly consequences of defective products described in this book besides the boeing 737 planes the examples of bad products include automobiles electrical energy networks pipelines bridges and other large structures banks drinkable water and financial services while the immediate or proximate causes of the disasters have been bad design or bad production the root or underlying causes have been bad corporate management and business cultures caused by corporate leaders the final five chapters provide short essays on product design production quality control management and culture and what the leaders of our private companies and government agencies might do to reduce the pitfalls that have led to so many defective products and their dire consequences

the key principle of systems engineering is that an aircraft should be considered as a whole and not as a collection of parts another principle is that the requirements for the aircraft and its subsystems emanate from a logical set of organized functions and from economic or customer oriented requirements as well as the regulatory requirements for certification the resulting process promises to synthesize and validate the design of aircraft which are higher in quality better meet customer requirements and are most economical to operate this book is more of a how to and a why to rather than a what to guide it stresses systems engineering is an integrated technical managerial process that can be adapted without sacrificing quality in which risk handling and management is a major part it explains that the systems view applies to both the aircraft and the entire air transport system the book emphasizes that system engineering is not an added layer of processes on top of the existing design processes it is the glue that holds all the other processes together the readership includes the aircraft industry suppliers and regulatory communities especially technical program and procurement managers systems design and specialty engineers human factors reliability safety etc students of aeronautical and systems engineering and technical management and government agencies such as faa and jaa
