this book had its beginning in 1967 when shirley g driscoll and kurt benirschke wrote in english the volume on placental pathology for the henke lubarsch the noted german handbook of pathology there seemed to be a need for wider distribution of the text and it was reprinted by springer verlag new york essentially the only book available devoted just to the human placenta dr benirschke authored 5 subsequent editions in collaboration with peter kaufmann rebecca baergen and graham burton in 1990 2nd edition 1995 3rd edition 2000 4th edition 2006 5th edition and 2012 6th edition in the early editions the most important material was in a larger font than the extensive review of exceptions and the discussion in the literature since 1967 many other shorter placenta books have been published in english french and german none of these have included the breadth of discussion or the voluminous references which includes details of many historic articles not readily available interest in the placenta has wildly expanded over the intervening 50 years with the vast majority of pathologists obstetricians and pediatricians recognizing its value in addition there are now quite a few new journals societies and meetings devoted to the placenta in both clinical and research areas the interest extends into areas of study well beyond the realm of anatomic pathology the 7th edition will of necessity differ from the prior editions which dr benirschke wrote largely himself at first and later with the help of the above noted co authors it will now be an international multi authored book with nearly 40 contributors revising one or more chapters the explosion of new information as necessitating some reordering of chapters and adding completely new chapters including chapters 31 and 32 innovations in placental pathology and imaging in placental pathology dr burton's section has been extensively edited as well the editors gave the new authors considerable latitude in how to write the new and or edited chapters many of the revised chapters retain much of dr benirschke's

anecdotal information as well as the voluminous references others are more modern in their approach all contain substantial new references and current information it is our hope that benirschke's pathology of the human placenta will remain as a mainstay reference in placental pathology it aims to help readers gain a broad understanding of how placental architecture is shaped during normal development with a view to appreciating how this may be perturbed in complications of pregnancy

natural killer nk cells are innate lymphocytes now recognized as members of a larger family of innate lymphoid cells ilcs both murine and human nk cells are well characterized effector cells with cytotoxic as well as cytokine production ability which mainly react in response to microbial and cell stress stimuli thus playing a central role in the defense against pathogen infection in tumor surveillance and in regulating immune homeostasis despite these established concepts our understanding of the complexity of nk cells also in view of their developmental and functional relationship with other ilc subsets is only recently emerging this research topic highlights the recent advances in nk cell and ilc research in human and mouse from basic research to clinical applications

the vascular system integral to organismal homeostasis is composed of numerous organ specific subsystems that while sharing core features exhibit unique characteristics tailored to specific organ needs central to these systems are endothelial and smooth muscle cells which bear numerous receptors for hormones and endocrine factors that regulate vascular functions these cells produce and release not only endocrine signals but also endocrine like factors that contribute to systemic homeostasis dysfunction in the vascular or endocrine systems can lead to a cascade of disorders impacting both systems followed up with our last volume endothelial dysfunction and endocrine diseases this new research topic aims to compile and synthesize recent clinical and laboratory research that sheds light on vascular cell dysfunction in the pathogenesis and progression of various endocrine disorders we seek to explore how disturbances in vascular cell function contribute to diseases such as diabetes metabolic syndrome and various hormonal imbalances and assess the efficacy of new and existing therapeutic interventions that target vascular dysfunction in the treatment of these endocrine diseases to deepen our understanding in this field we seek contributions that are focused on but not limited to the following themes o etiology of vascular endothelial and or smooth muscle cell dysfunction in endocrine disorders o the role of vascular cells in the pathogenesis of endocrine disorders o biomarkers for vascular dysfunction in endocrine systems o non invasive methods for identifying vascular dysfunction in endocrine disorders o the impact of endocrine disorders on vascular cell health o interactions between covid 19 and vascular dysfunction in endocrine disorders o therapeutic strategies to improve or reverse vascular dysfunction in the context of endocrine disorders o preventative approaches against vascular dysfunction in endocrine disorders we welcome original research papers and review articles that contribute to a better understanding of these topics

preterm birth affects over 15 million newborns worldwide each year and is the main contributor of neonatal mortality and morbidity while neonatal survival following preterm birth continues to improve this has not been matched by a decline in neurological outcome there is still a high prevalence of motor problems executive dysfunction and cognitive impairment in infants born preterm improved neuroimaging has helped to describe different types of neonatal brain injuries in this population and has given a better understanding of underlying pathogenesis however therapies are still lacking and there is a great need to find novel strategies to improve injury and functional outcome

this edited volume aims to describe physiological and pathophysiological mechanisms that underlie human maternal fetal interactions the book emphasizes the structure and development of the fetoplacental unit the endocrine and nutritional regulation of fetal development nitric oxide signalling solute carriers function and ion channels regulation in healthy pregnancies and diseases like preeclampsia gestational diabetes and maternal obesity among others also we highlight novel mechanisms associated with language impairment in children the use of serotonin inhibitors or cannabis during pregnancy and maternal conditions potential impact on cerebrovascular development in newborns and infants the cellular and molecular understanding of maternal fetal physiology and pathophysiology will allow the readers to understand the impact of diseases or conditions that are highly prevalent in pregnant women
